

HOW SAFE IS FLYING, REALLY?

Are the media's recent claims that driving is safer than flight true?

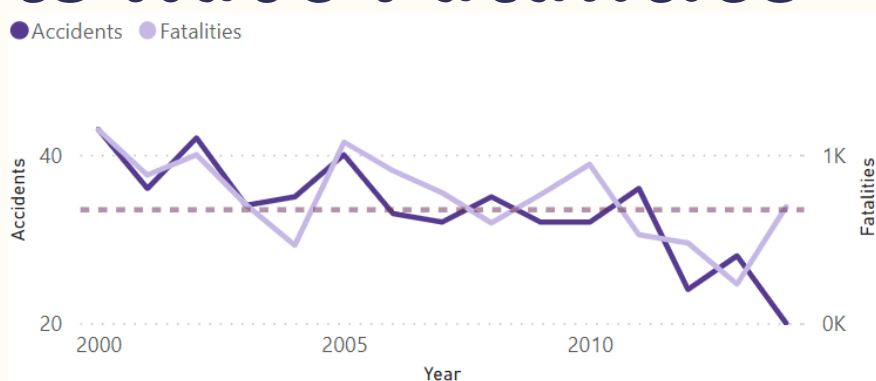

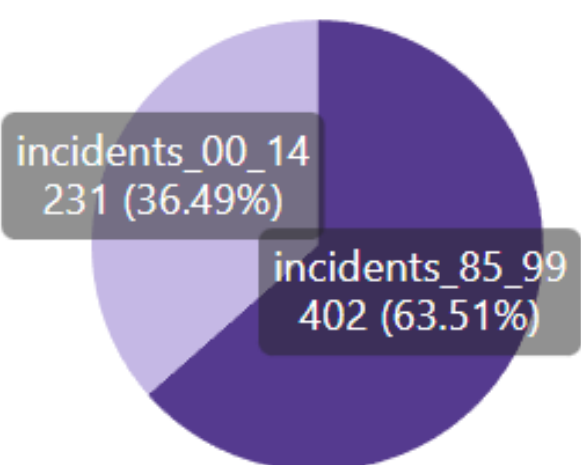

Accidents Over Time

Clear downward trend, that appears to only get steeper in recent years

Not All Accidents Have Fatalities

While aircraft accidents are inevitable as more people fly, not every incident will result in death

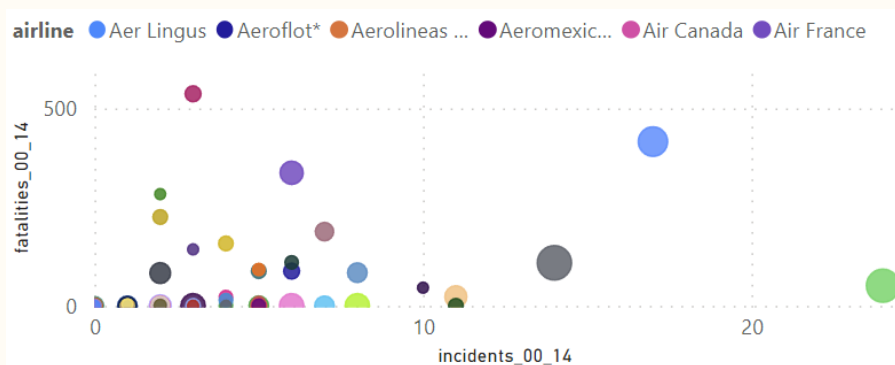

Total Incidents Down Significantly

Incidents in the 80s/90s were down nearly half in more recent years, indicating improvements in overall safety

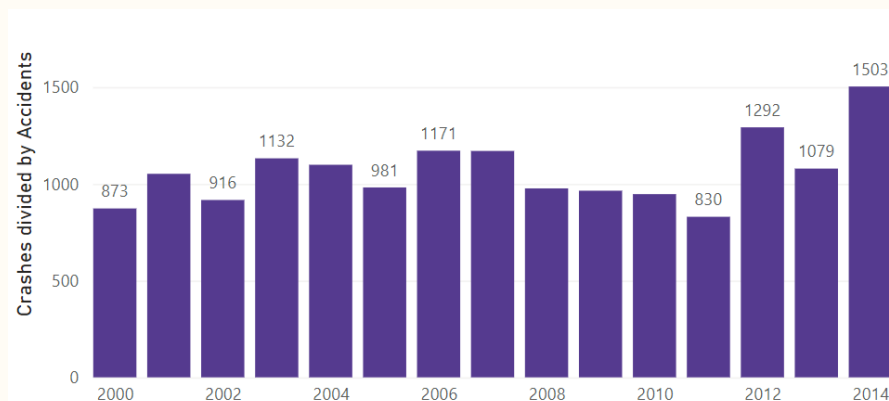

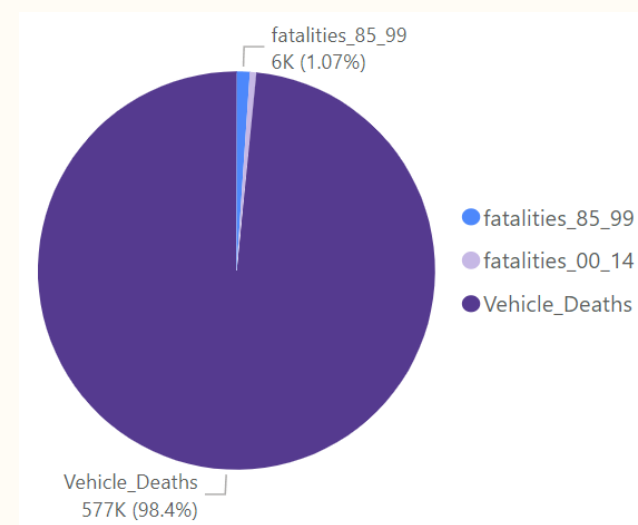

Fewer Incidents and Fatalities

Much fewer incidents, as well as fatalities per incident. Most frequent flier airliners experience majority of accidents

Incomparable With Driving

Flight travel safer than driver by several orders of magnitude

Don't believe everything the media says!
